ABSTRACT

- Doctor patient portal is a managing system that helps doctors as well as the patients by providing options of booking appointments as per the convenience of both doctor and patients.
- Through this system, doctors can easily manage the appointment slots online itself.
- The system helps the patients to book appointment of particular doctor who is specialist in their problem.
- While taking appointment, patients can mention their problem in the appointment. So that, the doctor is aware of patient problem for any further prescription and treatment before patient come to hospital.

INTRODUCTION

- We are developing the portal which is beneficial to the patients as well as to the doctors.
- The main feature of this Doctor Patient Portal is patients can take appointment of particular doctor who is specialist in our problem at our location in any country.
- Doctors also create their appointment mentioning their available time, specialization and place which is visible to patients.
- So that, it will be helpful to patients to take appointments.
- The advantage of this Doctor Patient Portal is by entering their location and selecting their required service, patients can get the available doctors.

SOFTWARE REQUIREMENTS

- Windows10
- > Python3
- dj-database-url==0.5.0
- Django==2.2
- > Pillow==7.2.0
- > psycopg2==2.8.5
- > pytz==2020.1
- > sqlparse==0.3.1
- > whitenoise==5.1.0
- django-bootstrap-form==3.4
- > gunicorn==20.0.4

HARDWARE COMPONENTS

- Processor Intel Core i3 Processor
- ➤ Hard Disk 5GB or above
- ➤ Memory 4GB RAM

EXISTING SYSTEM

- The existing system has a lot of paper work.
- To maintain the records of appointments and service manually, is a Time consuming task.
- Patients need to stand in queue for long time.
- If someone want to check the details of the

LIMITATIONS

- The existing system works manually.
- Lots of paper work and Human work is involved.
- The availability of doctor is unknown to the patients.
- > Patient details cannot be accessed efficiently.

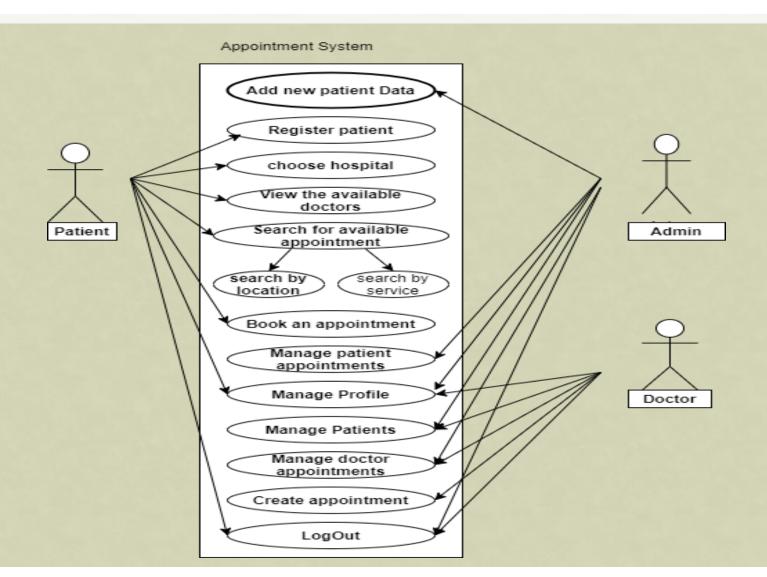

PROPOSED SYSTEM

- The proposed system that will help doctors in their work and will also help patients to book doctor appointments in online instead of standing in queue for long time.
- By entering their location and selecting their required service, patients will get the available doctors.

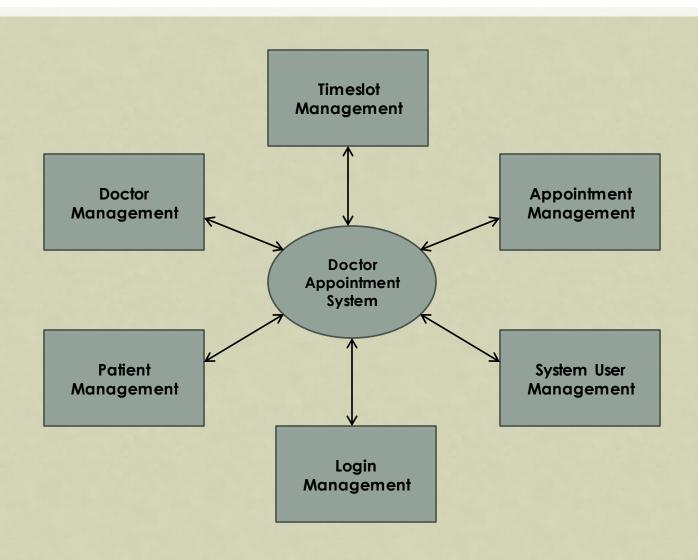

While taking an appointment in online, patients can mention their problem in appointment. So that the doctor is aware of patient problem for any further prescription and treatment before patient came to hospital.

TEST CASES FOR LOGIN FAILURE

1.	Test case ID	Login Failure
2.	Precondition	Enter usernameEnter passwordClick "Login" button
3.	Description	If username and password mismatch, an error message is displayed
4.	Test steps	Enter usernameEnter passwordClick "Login" button
5.	Expected Output	Login failure message has to be displayed
6.	Actual Output	Display a message saying "User does not exist"
7.	Status	Pass
8.	Remarks	

FUTURE ENHANCEMENT

- > We can provide SMS alert.
- We can provide E-mail alert.
- We can provide online bill payments.

CONCLUSION

The websites which recognize which doctor fits in criteria or which hospital is best for information which you register in their respective portals. Now our proposed system gives a easy way to find out the best doctor and best treatment.

Thank you
